

Wikipedia Search Application | Cheat Sheet

1. HTML Input Element

1.1 Search

The HTML

`input` element with the type search is designed for the user to enter the search queries.

```
i 1 <input type="search" />
```

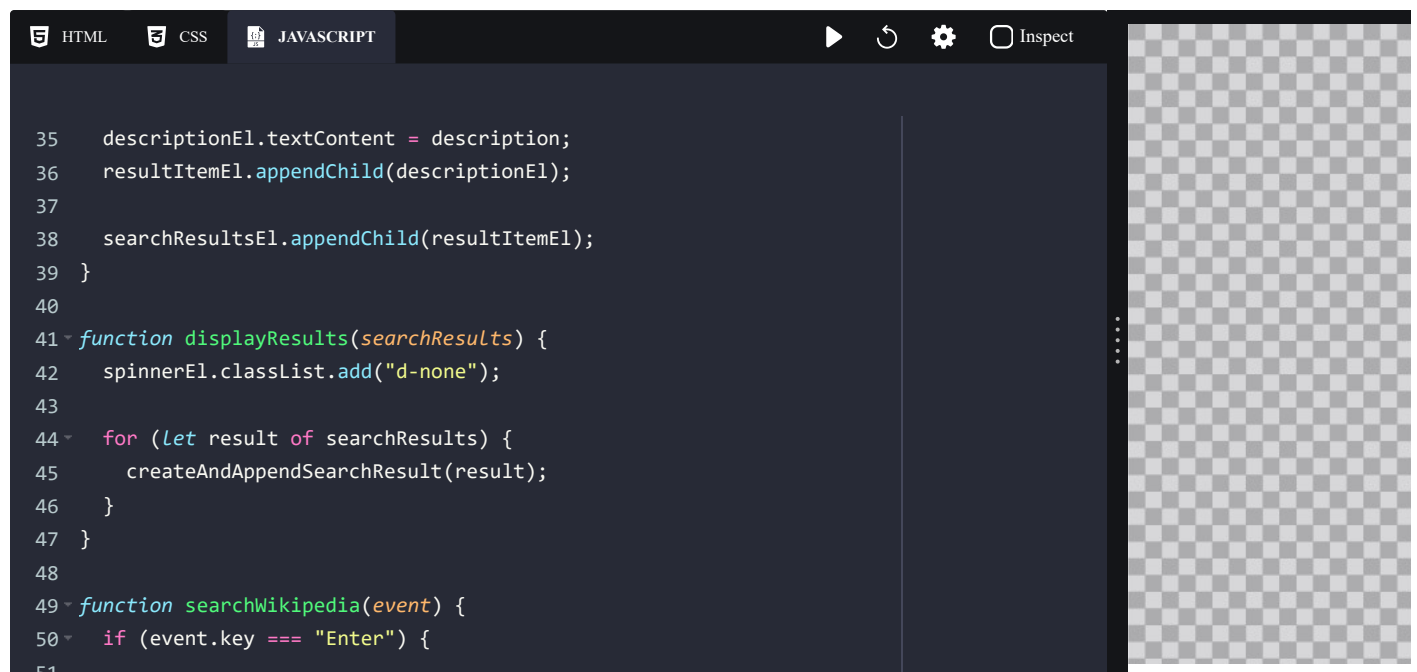

2. Bootstrap Components

2.1 Spinner

The Spinners can be used to show the loading state of the page.

```
i 1 <div class="spinner-border" role="status">
2   <span class="sr-only">Loading...</span>
3 </div>
```
